

# Bluetooth Video Recorder

The Bluetooth device is very easy to use if you follow these instructions (and remember there is a video about this to watch on the website):

- Below is a picture of the base of the device.
- To turn the device on, using the switch, slide it over to the letter 'V'
- Turn the device around and you should see a single blue LED light has turned on.

- Hold your finger against the middle power button and hold it until the device starts to blink with blue lights, release your finger and replace it again and hold for about 10 seconds, the blinking lights should stop and an orange LED light should appear, followed by a solid red LED light- this means your device is recording.

- Place your device so that the 'V+' symbol is pointing at where your meeting will take place.
- Once the meeting has finished, turn your device over to the base and slide the switch to the 'Off' position and your recording will have saved.
